```

score q No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.

```
The present sequence encodes a secreted or transmembrane polypeptide. CC The specification describes polypeptides designated PRO1484, PRO4334, CC PRO1122, PRO1889, PRO1899, PRO1887, PRO1785, PRO4333, PRO4357, PRO4405, CC PRO4356, PRO4352, PRO4380, PRO4354, PRO4409, PRO5737, PRO4425, PRO5990, CC PRO6030, PRO4424, PRO4422, PRO4354, PRO4409, PRO1889 polypeptide is CC useful for diagnosing tumour in a mammal. The polypeptides, their CC expression or activity of the polypeptide. Condition associated with CC expression or activity of the polypeptide. Conditions treated include CC obssity, diabetes or hyper-or hypo-insulinemia. The polypeptides are CC capable of inducing proliferation of mammalian kidney mesangial cells CC decreased mesangial cell for treating kidney disorders associated with CC decreased mesangial cell function such as Bergers disease or other CC dermatitis herpetiformis or Crohns disease. The nucleic acids may be used to generate transgenic animals for use in development and screening of therapeutically useful reagents and also for chromosome identification covered by the condition of the condition

This sequence represents the cDNA for a human immune system molecule (IMOL) isolated as clone 1890540 from the Incyte BLADTUT07 library.

The human IMOLs (AAB15536-B15550) and their encoding polynucleotides (AAA95775-A95789), and compositions comprising them are useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1441
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1441

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC may be used to treat or prevent disorders associated with decreased cc (e.g. inflammation, actinic keratosis, AIDS, Addison's disease), CC haematopoietic cancer, infections caused by virus (e.g. adenovirus, CC parvovirus, coronavirus), bacteria (e.g. Staphylococcus, Streptococcus, Shigella), fungi (e.g. Aspergillus, Blastomyces), parasites (e.g. CC plasmodium, Trypanosoma, intestinal protozoa), cell proliferative cd disorders (e.g. actinic keratosis, arteriosclerosis, bursitis), and CC cancers (e.g. leukemia, melanoma, sarcoma). The peptides are also cu useful as immunogens for the development of antibodies that cc specifically recognizes these peptides. The polynucleotides may be used for detect and quantify gene expression in biopsied tissues in which cc expression of IMOL may be correlated with the disease, as targets in a CC compounds in drug screening techniques. Antibodies which specifically compounds in drug screening techniques. Antibodies which specifically bind to IMOL may be used for the diagnosis of disorders characterized cc bind to IMOL may be used for the diagnosis of disorders characterized cc with IMOL or agonists, antagonists, or inhibitors of IMOL.

CC The invention relates to the human zacrp3 protein (AAB29580) and to CC nucleic acids which encode it (AAC64058), AAC64063). Zacrp3 is a homogue CC of adipocyte complement related protein (ACRP30) and contains a CC collagen-like domain comprising Gly-Xaa-Xaa or Gly-Xaa-Pro repeats, and a CC terminal Clq domain comprising 10 beta-strands. The zacrp3 gene is CC located on chromosome 5p12. The invention also relates to zacrp3 gene is CC ragments, fusion proteins containing zacrp3 polypeptides, CC zacrp3-specific antibodies, expression constructs and host cells CC comprising zacrp3 nucleic acids, and methods of recombinant production of CC cacrp3. Human zacrp3, and its agonists and atagonists may be used in the CC study and modulation of cellular metabolism and energy balance in CC mammals, and may therefore be used to treat disorders such as obesity and CC carpains, and conditions associated with these disorders. Due to its Clq Clike domain, zacrp3 and zacrp3-containing fusion proteins may be useful CC as antimicrobial agents, promoting lysis or phagocytosis of infectious cryanisms such as bacteria or viruses. Zacrp3, its fragments, fusion proteins, antibodies and activity modulators may also be used to inhibit CC collagen-induced platelet aggregation, adhesion, or activation, and may therefore have potential for promoting blood flow within the vasculature CC dimerisation and oligomerisation. The present sequence represents cDNA cc encoding human zacrp3 and its antibodies may additionally be used to study constanting human zacrp3 and present sequence represents cDNA constanting human zacrp3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human zacrp3; adipocyte complement related protein homologue; ACRp30; C1q domain; collagen-like domain; energy balance modulat cellular metabolism; metabolic disorder; obesity; anorexia; antimicrobial agent; infection; plateLet aggregation inhibition; adhesion; activation; vascular injury; antibacterial; antiviral;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid artivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to nucleic acid sequences AAF93744 - AAF93916 which encode human secretory or membrane proteins represented by AAB88317 - AAB88419. Included in the invention are primers AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate to cDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1709 BP; 480 A; 363 C; 390 G; 476 T; 0 other;

                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel human polynucleotides (AAI99513-AAI99538) and the encoded proteins (AAM99915-AAM9934) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antlagonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, altergies, autcimmune heamolytic anaemia, autoimmune thyroiditis, althritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases se.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained no electronic format directly or the sequence in the printed parasitic infections.
                                                                                                                                                                                                                                                                         Query Match

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzhelmer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                               The present sequence is human protein with hydrophobic domain encoding CC cDNA clone Hp10781. The polynucleotide and polypeptide of the invention CC may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate polypeptide expression. The polynucleotides CC into a host cell and culturing the cell to express the protein. The cC into a host cell and culturing the cell to express the protein. The CC polypucleotides and its complementary sequences may also be used as DNA CC probes in diagnostic assays and also used in gene therapy. The CC and in assays to identify modulators of polypeptide expression and CC supplements, to modulate cytokine and cell proliferation activity, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of CC microbial infections and autoimmune disorders such as multiple sclerosis, temmatoje arthritis and insulin-dependent diabetes), to modulate condulate tissue growth activity (e.g. for the treatment of CC treatment of Parkinson's disease, Huntington's disease and Alzheimer's CC disease), to modulate activin and inhibin activity, to modulate creciptor CC modulate haemostatic and thrombolytic activity, to modulate receptor CC ligand activity, to modulate inflammation and to inhibit tumour growth.

The invention relates to 592 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins. The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The proteins are useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. rheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also

The proteins are also useful for regulating haematopoiesis and for treating myeloid or lymphoid cell deficiencies. Sequences ABK34863-ABK35454 represent polynucleotides of the invention.

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                CC which encode human secretory or membrane proteins represented by
CC AAB8317 - AAB8419. Included in the invention are primers
CC AAF93917 - AAF64295 and AAF62232 - AAF62235 which are used to isolate the
CC CDNA sequences of the invention. The invention also includes methods for
CC the production of antibodies directed against the proteins, and cDNA
CC sequences, which can be used in vaccines. The polynucleotide sequences and the
CC proteins they encode may be used in the prevention, treatment and
CC diagnosis of diseases associated with inappropriate secretory
CC protein/membrane protein expression. The nucleic acids and complementary
CC (e.g. polymerase chain reactions (PCR)) to detect and quantitate the
CC presence of similar nucleic acid sequences in samples. They may also be
CC used to study the expression and function of secretory proteins/membrane
CC used to study the expression and function of secretory proteins/membrane
CC identify modulators (agonists and antagonists) of expression and
CC activity. The antibodies and antagonists may also be used as diagnostic agents for detecting the presence of the
CC used to study the expression and activity. The antibodies may also
De used as diagnostic agents for detecting the presence of the
CC agents to down regulate expression and activity. The antibodies may also
De used as diagnostic agents for detecting the presence of the
CC polypeptides in samples (e.g. by enzyme linked immunosorbant assay
CC arthritis and diabetes.
                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    망
                                                                                                                                                           Matches
                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                    mammalian skin cells. The polypeptide is useful for stimulating mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenesis, inhibiting angiogenesis and vascularisation of tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of oligonucleotides for examining expression patterns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide used in the identification disorders and encoding polypeptides used for treating disease, cancer and neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         keratinocyte growth stimulation; cancer; amunomodulatory; inflammation; neurological disease. es
